***Response to Amendment***

1. This Office action is in response to the reply filed on August 21, 2006.
2. The amendment filed with the above response is being entered.
3. Claims 1 through 14 and 21 are pending.
4. Upon reconsideration in view of the entire file wrapper history of the instant application and the scope of the prior art, the finality of the previous Office action on the merits is hereby withdrawn. The previously indicated allowability of claims 1 through 14 is hereby also being withdrawn. An election/restriction requirement follows.

***Election/Restrictions***

5. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1 through 14, drawn to a system (including heat sink details) for removing heat from a semiconductor integrated circuit, classified in class 361, subclass 710.
  - II. Claim 21, drawn to a method of cooling a semiconductor integrated circuit using a heat sink, classified in class 361, subclass 709.

6. The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another and materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case, the apparatus as claimed can be used to practice a process, which unlike the process that is Invention II as claimed, necessarily includes a step of maintaining the heat sink member in direct engagement with both the integrated circuit board assembly and the mounting member and which also includes a step whereby the heat sink is received by the attachment member. Also, the process as claimed can be practiced using an apparatus, which unlike the

Art Unit: 3753

apparatus that is Invention I as claimed, includes an attachment member which is not necessarily positioned on the mounting member.

7. Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.

8. Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.

9. Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ljiljana (Lil) V. Ciric whose telephone number is 571-272-4909. The examiner, who is on
